UC4 Incised Decking Joists

UC4 Incised Decking Joists

- 47 x 100/150 x 3600mm
- Incised on all four faces
- High pressure treated to achieve UC4 specification
- Manufactured in the UK from homegrown spruce
- Designed for external use in ground contact
- Guaranteed for 15 years

What is incising?

When a piece of timber has been incised, this means a bladed machine has made tiny incisions along the surface of the timber. Incising timber allows preservative treatment to penetrate further into the product, increasing its life span without affecting its strength.

What is Use Class 4?

Use Class 4, or UC4, is a class within BS EN 335-2 that determines where timber products are and are not suitable for use. If a product is Use Class 4, it is suitable to be used in ground contact, adhering to the TTF and WPA's action plan for treated timber products.

The UC4 Collection from BSW Timber

Cutting-edge technology enables us to offer a wide range of Use Class 4 products.

Our game-changing incising process creates small, structurally sound slits in the timber, ensuring that our high pressure treatment can impregnate 6mm into the timber, delivering a guaranteed minimum 15-year life span.

- Range of quality incised products
- Protected by BSW's 15-year UC4 warranty
- Developed for ground contact applications
- Manufactured from homegrown spruce
- Easy application of paint or stain
